Office - 507-752-7782
Cell - 507-220-4494

email: info@swdusttreatment.com

LET US SETTLE YOUR GRAVEL DUST

The dust control measures involve application of calcium chloride solution applied in early June with a possible second application later in the summer. It is effective in controlling dust problems through summer months under normal conditions. Standard application is approximately 18 feet wide and approximately 400 feet long, but can be done in any distance as long as it meets the minimums.

You must contact SW Dust Treatment for an application. Applications must be submitted with payment by the deadline.
